OPTAGLIO research center to center of attention on anti-counterfeit forensic technologies - executive security information

👤 Stergios F. 📅 2 months ago

LOCHOVICE, Czech Republic may additionally 15, 2017 OPTAGLIO today announced the establishment of a research core concentrated on forensic features of anti-counterfeit protection technologies for several types of files. This middle will work as a separate unit carefully related to OPTAGLIO Labs.

the brand new unit outfitted with a extensive range of technical accessories could be able to simulate different types of assaults against files similar to removal of shielding points. it'll center of attention on concepts for coverage in opposition t such attacks and building of latest technologies. New anti-counterfeit measures should be completely demonstrated to make sure their applicability within the environment of actual construction (velocity, batches, lamination temperature, pressures and so on.) The core is partly sponsored by eu dollars.

"the brand new research middle will deliver a special aggregate of diverse actual processes. we will also try to follow holograms on new substrates and open a lot of pleasing new questions. in preference to just building of latest products, our intention is to reach a radical figuring out of a phenomenon. this could permit us to build wholly new options," observed Dr. Tomáš Karenský, senior analysis supervisor in OPTAGLIO.

an important a part of analysis activities will center of attention on microholograms, tiny particles with a holographic surface, invented by way of OPTAGLIO. Microholograms are on occasion called „holographic filth" and enable a number of stages of inspection, together with forensic.

OPTAGLO is uniquely placed to run a scientific middle focused on forensic technologies. In 1994, it originated from Czech Academy of Science and research is still a excellent precedence for the corporation. OPTAGLIO has constructed a world scientific team and massive research middle, OPTAGLIO Labs, in Lochovice in significant Bohemia (Czech Republic). The enterprise is a pioneer and the international chief in e-beam lithography and patented many improvements, together with microholograms and specific applied sciences for integrating optical safety features into polycarbonate cards.

About OPTAGLIO:

OPTAGLIO is a leading international provider of advanced optical security instruments and the market chief in e-beam lithography. all over almost 25 years of our background, we have delivered a whole bunch of hundreds of thousands of holograms to governments, fiscal associations and different corporations in more than 50 international locations worldwide. Our interesting technology has been generally identified as the business general for optical safety.

OPTAGLIO, certified to valuable overseas standards, operates under strict 24/7 security supervision. Our finished protection gadget covers individuals, strategies, data and amenities. The business is a member of international Hologram association (IHMA) by which it registers all its protection devices and hologram in the vital security register, in London.
